

IN THE CLAIMS

Please amend the status of the claims to that as indicated below:

Claims 1-35 (canceled)

36. (currently amended) A detachable connection of two elements, comprising:

[[a]] an attachment rod consisting of only one bolt;

two elements detachably connected to one another via said one bolt;

a tensioning body having an azimuthally extending slot through which said one bolt is penetratable for fixing said one bolt at one end to one element of the two elements, said tensioning body being rotatable relative to said one element about an axis extending substantially perpendicular to said one bolt with said tensioning body being connected in any rotational position relative to said one bolt; and,

means for fastening said one bolt to said tensioning body, said means for fastening being rotatable about an axis that is distanced from a substantially central axis of said tensioning body and substantially parallel thereto, said means for fastening including a retaining head detachably attached to said one bolt and being rotatable relative to said tensioning [[body.]] body, said retaining head being eccentrically located within said tensioning body for tensioning said one bolt in an axial direction with rotational

movement of said tensioning body compensating said retaining head via a contra-rotational movement, thereby transmitting tension to said one bolt for said fixing of said one bolt.

37. (currently amended) The detachable connection of two elements according to Claim 36, wherein said one end is a first end and said one bolt has a second end opposite said one ~~end, or a first end,~~ ~~end~~ with said [[a]] second end of said one bolt being fastened to one element of said two elements.

38. (currently amended) The detachable connection of two elements according to Claim 36, wherein said one end is a first end and said one bolt has a second end opposite said first end ~~one end, or a first end,~~ ~~end~~ with said one bolt being fixed at [[its]] said second end of said one bolt via an additional tensioning body to a second element of said two elements, said additional tensioning body being rotatable relative to said second element about an axis extending substantially perpendicular to said one bolt, and further comprising additional means for fastening said additional tensioning body to said one bolt, said additional means for fastening being rotatable about an axis distanced from an axis of said additional tensioning body and substantially parallel thereto, said additional tensioning body being connected in any rotational position relative to said one bolt.

39. (currently amended) The detachable connection of two elements according to Claim 36, wherein said one bolt penetrates at least one of said two elements.

40. (previously presented) The detachable connection of two elements according to Claim 36, wherein said tensioning body is accommodated in said one element of said two elements connecting said tensioning body.

41. (previously presented) The detachable connection of two elements according to Claim 36, wherein said retaining head is detachably connected to said tensioning body.

Claims 42-47 (canceled)

48. (previously presented) The detachable connection of two elements according to Claim 36, wherein said tensioning body is of a substantially cylindrical shape.

49. (previously presented) The detachable connection of two elements according to Claim 36, wherein said retaining head is of a substantially cylindrical shape.

50. (previously presented) The detachable connection of two elements according to Claim 36, wherein said one element of said two elements is open on an axial end face.

51. (previously presented) The detachable connection of two elements according to Claim 36, wherein a cavity of said tensioning body is open on an axial end face.

52. (previously presented) The detachable connection
of two elements according to Claim 36, wherein said one
element of said two elements is closed on an axial end face.

Claim 53 (canceled)
